**Bayan Muzo solons ready to run for the Senate**

**By Rosemarie R. Lim**  
 BAYAN MUZO, CALABANGON, ILOILO CITY (PNA) — The Bayan Muzo party is preparing to run for the Senate in the 2007 elections. The party's leaders are already working on the party's platform and are looking for potential candidates.

# GMA orders Reds crushed in 2 years

## P1B to AFP, PNP kicks off all-out war vs NPA

**By Christine D. Acosta**

**CALABANGON, ILOILO CITY** — A MOVE TO TAKE THE war in Mindanao to a new level was announced yesterday as President Gloria Macapagal Arroyo ordered a P1-billion campaign to crush the 27-year-old communist insurgency with guns and helicopter gunships.

The campaign, which is being led by the Armed Forces of the Philippines (AFP) and the Philippine National Police (PNP), is aimed at eradicating the New People's Army (NPA) and its affiliates. The campaign is being launched in the provinces of Zamboanga, Cotabato, and Maguindanao.

The campaign is being launched in the provinces of Zamboanga, Cotabato, and Maguindanao. The campaign is being led by the AFP and the PNP. The campaign is aimed at eradicating the NPA and its affiliates.

## High court stops Luisita distribution to farmers

**By Arnold B. Reyes**

**THE SUPREME COURT** has ordered the government to stop distributing Luisita rice to farmers. The court ruled that the government is not allowed to give away rice to farmers without proper compensation.

The court's decision is a setback for the government's rice distribution program. The government had been distributing Luisita rice to farmers as a form of social justice.

The court's decision is a setback for the government's rice distribution program. The government had been distributing Luisita rice to farmers as a form of social justice.

Insurance coverage is a key element of a company's risk management strategy. It is important to ensure that the company has adequate coverage for all risks it faces. This includes property, liability, and workers' compensation insurance. The company should also consider other types of insurance, such as cyber insurance and directors and officers insurance. The company should review its insurance policy regularly to ensure it remains up-to-date and adequate for its needs.

**Abstract.**—The authors examined the effects of a 12-week, 100% body weight (BW) resistance training program on the muscle strength, body composition, and metabolic profile of 10 sedentary, middle-aged men. The subjects were randomly assigned to either a resistance training or control group. The resistance training group performed a 12-week, 100% BW resistance training program, while the control group performed no exercise. The resistance training group showed significant increases in muscle strength, body composition, and metabolic profile compared to the control group. The resistance training group showed significant increases in muscle strength, body composition, and metabolic profile compared to the control group. The resistance training group showed significant increases in muscle strength, body composition, and metabolic profile compared to the control group.

• The overall results give the message that, while some organizations are doing it right, many are not. The results suggest that the following are key areas for improvement:

# Mild quake jolts Zambo

**By MARGARET L. LAMAGUIRA** **INQUIRER**  
A mild earthquake jolted Zamboanga City on Tuesday night, but no damage was reported. The quake, which was felt in the city and in the surrounding area, was a magnitude 2.5 on the Richter scale, according to the Philippine Institute of Volcanology and Seismology (PHIVOLCS).  
The quake hit at 11:10 p.m. and quickly subsided, leaving no damage, according to PHIVOLCS.

# Pinoy or not, Asi must pay millions in taxes—BIR

**Manila**

When the BIR starts computing taxes on assets in the new year, it will be looking for Pinoy-owned assets, and also assets of those who have been in the country for more than 180 days.

But according to BIR, it is not only Pinoy-owned assets that will be taxed, but also assets of those who have been in the country for more than 180 days.

Pinoy-owned assets include land, buildings, and other immovable property, as well as movable property such as cars, boats, and airplanes.

Assets owned by those who have been in the country for more than 180 days include land, buildings, and other immovable property, as well as movable property such as cars, boats, and airplanes.

## Revenue rises 10%

The BIR has announced that the revenue for the 2004 year is up 10% from the 2003 year. This is due to a combination of factors, including a 10% increase in the number of taxpayers.

# Asia urged to prepare for cut in US imports

Richer economies should buy more from poor neighbors, says Finance ex-ec

By Michelle S. Davis

WASHINGTON, Dec. 17 (AP) — Asian nations are being urged to prepare for a sharp decline in U.S. imports starting next year, as the United States seeks to reduce its trade deficit. The U.S. Trade Representative's office says that while the U.S. will continue to be a major market for Asian goods, the volume of imports from the region is expected to fall significantly over the next five years. This is due to a combination of factors, including the U.S. trade policy review of Asia, which is currently underway, and the U.S. trade policy review of Asia, which is currently underway. The U.S. Trade Representative's office says that while the U.S. will continue to be a major market for Asian goods, the volume of imports from the region is expected to fall significantly over the next five years. This is due to a combination of factors, including the U.S. trade policy review of Asia, which is currently underway, and the U.S. trade policy review of Asia, which is currently underway.

## Targeting a new key in war vs obesity

By Charles F. Bohan

**P**harmaceutical companies are targeting a new key in the war against obesity, one that may be the most important of all: the brain.

The new drugs are designed to act on the brain's reward system, the part that makes eating and drinking so pleasurable. By blocking this system, the drugs hope to reduce the desire to eat and drink, leading to weight loss.

At least one study

has shown that a drug called lorcaserin can lead to significant weight loss in obese people. The drug is currently in clinical trials, and if approved, it could be one of the first of a new class of obesity drugs.

Obesity drug

## Solving a math problem

Mathematicians have found a way to solve a long-standing problem in the field of quantum mechanics. The problem, known as the "measurement problem," has puzzled scientists for decades. It deals with the question of how a quantum system, which can exist in multiple states at once, collapses into a single state when it is measured.

### Paradox

By David  
 for Phil

Quantum mechanics is a branch of physics that deals with the behavior of particles at the smallest scales. It is a field that has been the subject of much debate and controversy, particularly when it comes to the measurement problem.

One of the most famous paradoxes in quantum mechanics is the "Schrödinger's cat" paradox. It involves a cat that is supposedly both alive and dead at the same time, depending on whether it has been observed.

Another paradox is the "EPR paradox," named after the physicists Albert Einstein, Boris Podolsky, and Nathan Rosen. It deals with the question of whether quantum mechanics is a complete theory of nature.

Despite these paradoxes, quantum mechanics has been incredibly successful in predicting the behavior of particles at the smallest scales. It is a field that continues to fascinate scientists and the public alike.

One of the most interesting aspects of quantum mechanics is the way it challenges our everyday intuition about the world. It shows us that at the smallest scales, the rules of physics are very different from the rules we experience in our daily lives.

Quantum mechanics is a field that is still full of mysteries and unanswered questions. It is a field that continues to push the boundaries of our understanding of the universe.

One of the most exciting developments in quantum mechanics in recent years has been the discovery of quantum entanglement. This is a phenomenon in which two particles become linked in such a way that the state of one particle instantly affects the state of the other, no matter how far apart they are.

Quantum entanglement has been the subject of much research and debate. It is a phenomenon that has the potential to revolutionize our understanding of the universe and to lead to new technologies.

Quantum mechanics is a field that is still full of mysteries and unanswered questions. It is a field that continues to push the boundaries of our understanding of the universe.

## How the brain handles information

**Q**uestions about the brain's ability to process information have long been a topic of interest for scientists. The brain is a complex organ that is capable of performing a wide range of tasks, from simple reflexes to complex decision-making. Understanding how the brain works is a key goal of neuroscience.

One of the most important areas of research in neuroscience is the study of the brain's neural networks. These networks are made up of billions of neurons that are connected to each other in a complex web. The way these networks are organized and how they communicate is what allows the brain to perform its various functions.

Another important area of research is the study of the brain's plasticity. This is the brain's ability to change and adapt in response to new experiences and information. Plasticity is what allows the brain to learn and to recover from injury.

Understanding the brain's ability to process information is not only important for basic research but also for clinical applications. For example, knowing how the brain works can help us develop better treatments for neurological disorders and for improving cognitive function.

The study of the brain is a field that is still full of mysteries and unanswered questions. It is a field that continues to push the boundaries of our understanding of the human mind.

One of the most interesting aspects of the brain is the way it is able to perform so many different tasks. The brain is a truly remarkable organ that is capable of everything we do.

The study of the brain is a field that is still full of mysteries and unanswered questions. It is a field that continues to push the boundaries of our understanding of the human mind.

One of the most exciting developments in neuroscience in recent years has been the discovery of the brain's "default mode network." This is a network of brain regions that are active when a person is at rest and not focused on any particular task.

The default mode network has been the subject of much research and debate. It is a network that has the potential to revolutionize our understanding of the brain and to lead to new treatments for neurological disorders.

The study of the brain is a field that is still full of mysteries and unanswered questions. It is a field that continues to push the boundaries of our understanding of the human mind.

## Women who exercise during pregnancy may have benefits

**W**omen who exercise during pregnancy may have several benefits, including a lower risk of complications and a faster recovery after birth. Exercise during pregnancy can also help to reduce the risk of gestational diabetes and preeclampsia, two conditions that can be dangerous for both the mother and the baby.

Exercise during pregnancy can also help to improve the mother's mood and to reduce the risk of depression. It can also help to prepare the mother for labor and delivery, making the experience less stressful. For these reasons, many doctors recommend that pregnant women engage in regular, low-impact exercise.

One of the most important benefits of exercise during pregnancy is the reduction in the risk of complications. Women who exercise regularly during pregnancy are less likely to experience problems such as high blood pressure, gestational diabetes, and preterm labor. They are also more likely to have a healthy weight gain during pregnancy.

Exercise during pregnancy can also help to improve the mother's overall health and well-being. It can help to reduce the risk of chronic diseases such as heart disease and diabetes. It can also help to improve the mother's energy levels and to reduce the risk of fatigue.

Exercise during pregnancy can also help to prepare the mother for labor and delivery. Women who exercise regularly during pregnancy are more likely to have a shorter labor and a faster recovery after birth. They are also more likely to experience less pain during labor and delivery.

Exercise during pregnancy can also help to improve the mother's mood and to reduce the risk of depression. It can help to provide a sense of accomplishment and to reduce the stress of pregnancy. It can also help to provide a social outlet for the mother, which can be helpful in reducing feelings of isolation.

Exercise during pregnancy can also help to improve the mother's overall health and well-being. It can help to reduce the risk of chronic diseases such as heart disease and diabetes. It can also help to improve the mother's energy levels and to reduce the risk of fatigue.

## Empathy for patients

By Susan B. Fegley, MD

Empathy is the ability to understand and share the feelings of another person. It is a key component of effective communication and is essential for building strong relationships with patients.

Empathy is not just a feeling; it is a skill that can be learned and practiced. It involves active listening, paying attention to the patient's words and body language, and trying to understand the patient's perspective.

Empathy is important for patients because it helps them to feel understood and supported. It can help to reduce their anxiety and to make them more comfortable with their healthcare providers.

Empathy is also important for healthcare providers because it helps them to provide better care. When a provider is empathetic, they are more likely to listen to the patient's concerns and to take the time to address them.

Empathy is a key component of effective communication and is essential for building strong relationships with patients. It is a skill that can be learned and practiced, and it is one that every healthcare provider should strive to develop.

Empathy is important for patients because it helps them to feel understood and supported. It can help to reduce their anxiety and to make them more comfortable with their healthcare providers.

**June 28, Sunday**

**June 21, Wednesday**  
 In the morning, we went to the  
 National Museum of Natural History,  
 where we saw the famous  
 "Dinosaur Hall" and the  
 "Mammal Hall". We saw  
 many interesting things,  
 including the bones of  
 dinosaurs and the skins of  
 mammals.
